REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The closest prior art of record, Ohkuma (US 5,358,729) teaches treatment of starch with 22.5 liters of a 1% hydrochloric acid and then heating the acid treated starch to a temperature of 130°C, 140°C, 150°C, 160°C and 170°C (col. 14, Experimental Example 1). The whiteness level obtained for these temperatures is shown in Table 13 (col. 23). Even though Ohkuma does not specify the pH of the starch, according to the description of Ohkuma in Experimental Example 1 the pH of the acidified starch is -0.86, which is much lower compared to the pH range instantly claimed. For such a highly acidic starch Ohkuma shows a whiteness level of 66 only for a temperature of 130°C and the whiteness level goes down on increasing the temperature. The secondary reference, Klinger (US 6,844,022) teaches heating of acidified starch but states that heating above 120°C is to be avoided (col. 2). Even though white to yellowish white product, which is a gel, is mentioned in Tables 2A-C it is after neutralization with base to a pH of 6.0-6.5 and after heating to a maximum temperature of 105°C. There is no whiteness level taught either. Both references do not teach or suggest a correlation between whiteness level, pH and temperature. The instant method of producing starch with a whiteness level of at least 65 being maintained by heating starch between 140°C-180°C after acidifying it to a pH range of between 1-4 is neither taught or rendered obvious by the prior art.

Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
